## Data collection

**Figure 1.** Recommended W-shaped sampling pattern for a 15-acre field. Each sample should be composed of at least 10 cores.

- Soil sampling
  - Capture variability within a field, treatment, or plot
  - Sample at level that treatment is applied
    - More finite the better!

## Commercial Nitrogen Optimization Pilot Grant Program

### Introduction to Program

The application period for the 2024-2025 Nitrogen Optimization Pilot Program (NOPP) grant cycle is now closed.

NOPP is designed to encourage agricultural producers to develop innovative approaches to optimize the application of commercial nitrogen for a duration of at least two growing seasons. The producers must collaborate with a UWS institution, which will monitor the grant project on-site. The total award to an applicant cannot exceed \$40,000.

Under 92.14(16), Stats., grant recipients must meet all of the following eligibility requirements to be considered for funding:

- Project must include two growing seasons.
- UWS institution should monitor the grant project on-site.
- Priority will be given to innovative projects not currently funded through state or federal programs.
- Priority will be given for longer-term projects.

### Technical Research Guide

#### Research terminology

- **Replicate:** repeating treatment
- **Block:** repeating treatments grouped together
  - Blocks allow for ease in sampling and data organization/analysis.
  - Blocking may not be possible for all experiments due to field shape/size. All treatments may then be completely randomized.
- **Treatment:** strip that management is applied to
- **Plot:** Each unique strip, only occurs once for each project

Figure 1. Plot design with labeled research terminology.

#### Research design requirements

Some projects might not be able to meet these requirements due to equipment size, fertigation patterns, long term crop impacts, etc. Contact Monica or Lindsey to work around any specific issues and develop a viable research project.

#### Replication

*Definition-* Repeating experimental treatments across conditions. For example, if a research project has 4 nitrogen rates, these rates would need to be repeated or replicated 4 times across the field

# REIMBURSEMENTS

- NOPP grants will be paid using a reimbursement system.
- Proof of all payments are required for this grant.
  - Invoices
  - Point of Sale receipts
  - Spreadsheets for stipends paid out
- Each expense needs to relate back to a line item on the approved budget.
- A reimbursement form is available on the [NOPP webpage](#).
- Will need W-9 forms to add entity to be paid to the State system.

# Community & Outreach

---

Scan to access  
private NOPP  
Facebook group

You're encouraged to plan  
outreach events &  
materials related to your  
NOPP project!  
Let us know about  
events/meetings so we can  
help promote it and if  
you'd like assistance.

# Community & Outreach

We will work with each group to spotlight your NOPP project on Facebook: "Wisconsin Agriculture – Extension"

Opportunities for NOPP participants to gather to share experiences, learnings, & knowledge.

## NOPP Project Spotlight!

Four farms affiliated with the Lafayette Ag Stewardship Alliance (LASA) are Nitrogen Optimization Pilot Program (NOPP) grant recipients. Their project is designed to explore the following question: "What is the optimum N rate that maximizes profitable corn grain production and limits the risk of N loss to environmental factors when planted green into cereal rye cover crop?".

The group asserts that understanding the N cycle within a cover crop system is paramount to successful N management, noting that the N immobilization rate of cereal grain cover crops is expected to increase as the C:N ratio of cover crops increases.

Another motivating factor for pursuing NOPP funding is the opportunity to conduct local on-farm, field-scale research within the driftless region of Wisconsin. Due to a high risk of soil and nutrient runoff and nutrient leaching in this geography, this project will evaluate the N management requirements necessary to increase acres of cover cropping and no-till across the region. In addition, the ability for producers to conduct field-scale research on-farm offers increased validity and acceptance amongst growers compared to remote, small-plot research.

Learn more about the Wisconsin Department of Agriculture, Trade and Consumer Protection (DATCP) Nitrogen Optimization Pilot Program and grant recipients here: <https://datcp.wi.gov/.../CommercialNitrogenOptimizationPi...>
